

Supply Chain Management

BENEFITS

Increase picking productivity and visibility. Facilitate shorter pick journeys and send goods straight to the appropriate loading bay by producing bulk picks coupled with individual sequenced picks. Drill down on bulk picks without regenerating previously printed tickets.

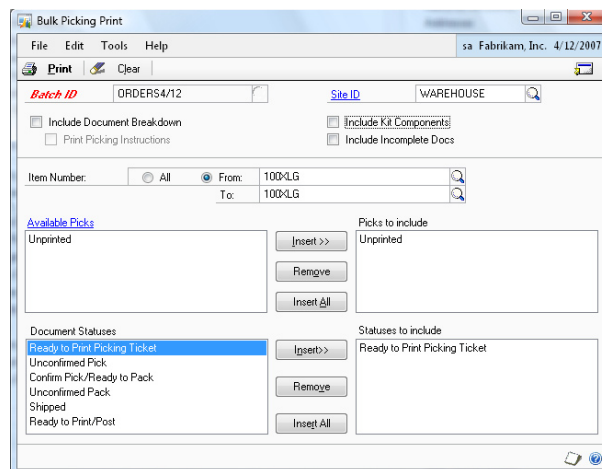

Gain control over picking processes. Take control of the way you pick items by setting parameters based on site, bin sequence, schedule, consolidation, or individual item to maintain the best profit margin.

Minimize overhead costs. Reduce your handling time and cut down on errors by consolidating bulk pick information. Implement efficient and effective picking processes that meet your needs at each of your sites.

Improve efficiency and customer service levels. Gain operational efficiency and serve customers effectively through zone picking according to your warehouse layout, while still presenting documents to the customer in their preferred sequence.

Advanced Picking in Microsoft Dynamics GP

Increase visibility and tracking for picking information. With Advanced Picking in Microsoft Dynamics™ GP, you can tailor picking routines to meet your individual site's business requirements, bin or bay sequence, or method of operation. This provides your organization with the flexibility needed to lower overhead, reduce handling, and improve accuracy for both single and multi-site warehouse operations.

SAVE TIME AND EFFORT by issuing consolidated (bulk) picking lists across numerous orders for common items.

TAILOR OPERATIONS at the site level by specifying whether or not bulk picking is in use.
