

Purchasing

Microsoft Dynamics™ SL

BENEFITS

- **Make smarter choices**
Provide instant access to purchasing information. Flexible vendor ID structures provide meaningful identification and help you analyze vendor performance for more informed decisions.
- **Work the way you want**
Flexible setup options fit the way you work and can be changed as your operations evolve. Define default shipping addresses, printing options, and data retention periods. Or, specify default general ledger accounts and decimal precision options.
- **Gain efficiency**
Enter purchase orders, receipts, and vouchers — at the most sensible times in the cycle — quickly and easily through the seamless integration of information inherent in all Microsoft Dynamics SL modules.
- **Streamline processes**
Enter simple purchase orders with only three pieces of information: vendor ID, inventory item ID, and quantity. Everything else — including unit cost, unit of measure, and account/sub-account information — is entered by default, based on your business rules.
- **Maximize buying power**
Make informed decisions using a variety of targeted reports that help you negotiate the best prices by understanding what products and services your company needs, the right time to order them, and the best vendors.

Boost productivity and reduce transaction costs with increased purchasing accuracy, speed processing, streamlined receiving, and efficient invoice matching and vouchering. Microsoft Dynamics SL Purchasing provides buyers with accurate, up-to-date vendor and pricing information to help them make consistent, cost-effective buying decisions.

Straightforward and easy to use, buyers can work smarter and faster with instant access to information and streamline order processing.

The screenshot shows the 'Purchase Orders (04.250.00)' window in Microsoft Dynamics SL. The window title is 'Purchase Orders (04.250.00)'. The 'PO Number' is 000011, 'PO Type' is Regular Order, and 'Company' is 0060. The 'Vendor ID' is V00213, 'Status' is Purchase Order, and the vendor name is 'Fabrikam, Inc.'. The 'Line Items' tab is selected, showing a grid with columns: Line, Purchase For, Inventory ID, Site ID, Quantity, UOM, and Unit Cost. The grid contains three rows of data:

Line	Purchase For	Inventory ID	Site ID	Quantity	UOM	Unit Cost
1	Goods for Sales Order	0RREARHLB	200	6	EA	35.00C
2	Goods for Sales Order	0RREARWHEEL24	200	6	EA	32.00C
3	Goods for Sales Order	0RTIRE24	200	6	EA	27.00C
4						
5						
6						
7						
8						
9						
10						

At the bottom of the window, there are buttons for 'Find Item', 'Receipt/Voucher', 'Sales Orders', 'Print', 'Send Electronically', and 'Electronic Inquiry...'. The 'Total Amount' is 564.00. The user is 'INS 0060 SYSADMIN' and the date is '1/22/2007'.

Easily identify whether order items are for inventory or internal use, such as office supplies.

FEATURES

BENEFITS

Instant Updating	Update inventory immediately, rather than when the vendor's invoice arrives. Simply enter the packing slip PO number when an order arrives to create a receipt on the spot.
One-Step Invoice Accounting	Create accounts payable vouchers automatically when purchase orders are received, helping eliminate redundant data entry.
Targeted Reports	Create reports with Crystal Reports and save in various formats, including Microsoft Office Excel, Microsoft Office Word, IBM's Lotus, Open Database Connectivity (ODBC), and HTML. Reports include purchase order register, purchase order status/history, and anticipated deliveries.
Multiple Order Type/Addresses	Bill any type of order to one address and ship it to another. Purchasing supports multiple ship-to addresses as well as a variety of order types, including regular, standard, blanket, and drop ship orders.
Flexible Receipt Processing	Track open orders, override unit costs, and receive quantities larger than original orders. Units of measure, which can differ from an item's stock unit, are automatically converted on receipt to stock unit measures, to update inventory accurately.
Robust Integration	Microsoft Dynamics SL Purchasing integrates with other Microsoft Dynamics SL modules, including Accounts Payable, Inventory, and Order Management, to reduce redundant data entry and improve overall efficiency.
Inventory/Non-Inventory Identification	Distinguish between stock and non-stock items by indicating on the PO whether items are for internal use, such as office supplies, or for inventory, such as resale or production items.
Change Order Support	Maintain comprehensive, long-term records on purchase order activity, including up to 99 change orders such as quantity, price, and shipping instructions.
User-Specified PO History	Specify during setup how long you want to keep information stored in your Purchasing system. Purchasing supports up to 99 periods of transaction detail.
Quick Send Electronic Document Delivery	Send your purchase orders to vendors electronically via email or fax for instant communication.
